

Interactive Insights into Top 50 University In US

Guanyi He | ghe4@uw.edu | AA

Crystal Chen | yanyuc3@uw.edu | AA

What is your **topic**?

We are developing an interactive map showcasing key information about the top 50 U.S. universities to assist high school students in making informed application decisions. This map will display each university's acceptance rate, student-to-faculty ratio, and tuition costs, providing a comprehensive overview of these institutions. Our visualization also serves government agency and nonprofit organizations who can better allocate resources to support universities and students.

Project Significance:

Many students face challenges in selecting universities due to the abundance of reputable institutions in the U.S. Often, they lack information about each university's location, culture, and application competitiveness. Our map aims to bridge this gap by offering a clear and concise visual representation of essential data, enabling students to better understand their options and make more informed choices. Large organizations that funds student scholarships, research and support could use this interactive map to make funding decisions and policy recommendations.

Who are your **readers**?

Who are your readers? What are your assumptions about them? Why are they reading your page?

We are aim to target the diverse readers who are interested in understanding and analyzing college admission rates at the top 50 universities in the United States. Audiences include high school students, high school applying officers, parents of higher level education candidates. They are looking for higher education based on several factors of colleges such as the admission rate each year, surrounding environment, and ranking etc. We assume that these audiences have some basic knowledge of college but know little about data visualization, and they are willing to compare universities on multiple factors. The government, companies, nonprofit organizations could also be readers that they provide funding to universities to support their operations, research and scholarships. Our page combines various factors about top 50 colleges, providing a more comprehensive and intuitive view of data rather than getting information from scatter sources .

What **datasets**?

What dataset(s) do you plan to use? Why are these datasets legitimate/authoritative? Please link to all datasets.

Application/Enrollment Stat of College Admission (Region, undergraduates, fee in Yrs, admission):

What are some possible **questions** to address via visualization?

List some possible questions that you think are amenable to being addressed via interactive visualization and why? Given the size and scope of this project, you should be able to address at least 3 different questions.

Please include at least two sketches—manual sketches either drawn with paper/pencil or a digital sketching app—to portray initial ideas.

1. Which school in the top 50 has the highest student-faculty ratio/tuition rate?
2. Which schools in top 50 has over 15% acceptance rate and lower than 50,000 tuition?
3. How far is my dream school from my home?
4. How do acceptance rates compare across different states or regions?
5. What is the geographic distribution of the top 50 universities?
